Dear HIPE-2026 Organising Committee,

Please find attached our official submission for the HIPE-2026 Shared Task on Person-Place Relation Extraction. We are submitting 3 runs as Team Hansel&Gretel.

The archive `Hansel&Gretel.zip` contains the following 12 prediction files (4 test sets × 3 runs).

Run 1 — Fine-Tuned Generative LM

- Base Model: Qwen/Qwen2.5-3B-Instruct
- Parameters: ~3 billion
- Model Size: ~6.2 GB (bfloat16); LoRA adapter checkpoint ~48 MB

Run 2 — Multi-Agent Fine-Tuned LM (Strategy 7)

- Base Model: Qwen/Qwen2.5-7B-Instruct
- Parameters: ~7 billion
- Model Size: ~15.2 GB (bfloat16); 3 LoRA adapter checkpoints ~48 MB each (~144 MB total)

Run 3 — Zero-Training Few-Shot LLM + Wikidata Knowledge Injection (Strategy 9)**

- Base Model: OpenAI GPT-OSS 120B (accessed via IBM RITS inference gateway)
- Parameters: ~120 billion
- Model Size: ~240 GB (bfloat16, cloud-hosted; no local footprint)

All prediction files are formatted according to the official HIPE-2026 JSONL schema and have been validated against the official `check\_jsonschema.py` script provided by the organisers.

Please do not hesitate to reach out if you have any questions.

Best regards,
Team Hansel & Gretel
IIT Roorkee
